***Imidan*[®] 70-W**
Agricultural Insecticide

EPA Reg. No. 10163-169

DIRECTIONS FOR USE

It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. All applicable directions, restrictions and precautions on the EPA registered label are to be followed. This labeling must be in the possession of the user at the time of pesticide application.

CROP

Pine Seedlings (White, Slash and Loblolly) and Nursery Beds

PESTS CONTROLLED

Pales Weevil (*Hylobius pales*) and Pitch-eating Weevil (*Pachylobius picivorus*)

USE RATE and METHOD OF APPLICATION

Use Imidan 70 as a 4% top spray applied to the seedlings in the nursery bed. The solution should be sprayed on the seedlings from the root collar to the stem and foliage. This procedure should be repeated in the opposite bed direction to ensure complete coverage of seedlings.

The addition of an extender such as Nu-film 17[®] or Plantgard[®] may help to retain the Imidan 70 on the foliage under high rainfall conditions.

PRECAUTIONS AND RESTRICTIONS

Do not apply this product through any type of irrigation system.

Do not enter or allow worker entry into treated areas during the restricted-entry interval (REI) of 24 hours unless label prescribed personal protective equipment (PPE) is worn.

Treated seedlings should not be handled until the spray solution has dried on the stem and foliage.

Workers handling treated seedlings should waterproof gloves during bagging and planting.
