

The Core Curriculum is an opportunity to diversify your academic experience and serves as an introduction to Auburn University's General Education [Student Learning Outcomes](#), which are later reinforced through major courses, work experiences, and participation in activities and organizations on campus.

In order to become lifelong learners and use a student's education to solve practical problems, by the time of graduation, students will be able to effectively:

Locate, evaluate, and use information

Read and think critically

Apply mathematical methods

Write and revise for a variety of purposes

Create and deliver oral presentations

Analyze their own society and its relationship to the larger global context

Interact in intercultural situations

### Apply scientific principles

- Recognize sound science (this includes the ability to evaluate good and bad data).
- Draw conclusions and solve problems based on data, observations, and graphs (deduction).
- Use models to predict outcomes.
