

Equipment Maintenance Management Solutions

AUBURN UNIVERSITY

Remi's program is a proven alternative to Original Equipment Manufacturer service agreements. We consolidate your existing equipment service agreements into one comprehensive program and eliminate the inefficiency of having to manage multiple service agreements from various manufacturers. You have the *freedom to use your current service provider or any desired provider for each service event.*

Remi analyzes your current equipment maintenance portfolio, maintenance agreements, historical maintenance expenditures, and operational practices to develop a customized program to meet your unique needs. The goal of each program is to deliver the specialized management tools, expertise, and support necessary for you to achieve enhanced equipment performance coupled with significant cost savings.
