

# **Induction of oxidative stress in 3T3-L1 differentiated adipocyte cells**

**Adebowale Oyerinde**

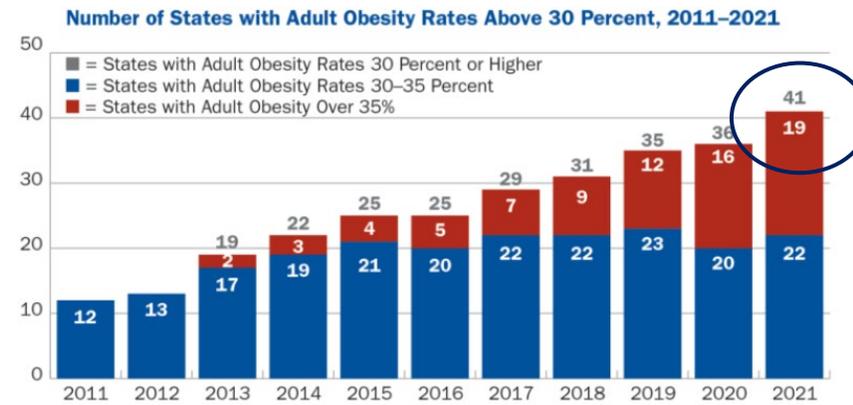

**Major Professor: Dr. Geetha Thangiah**

**Department of Nutritional Sciences, Auburn University, Auburn, AL**

## OBESITY: Prevalence, Cause, and Adverse effect.

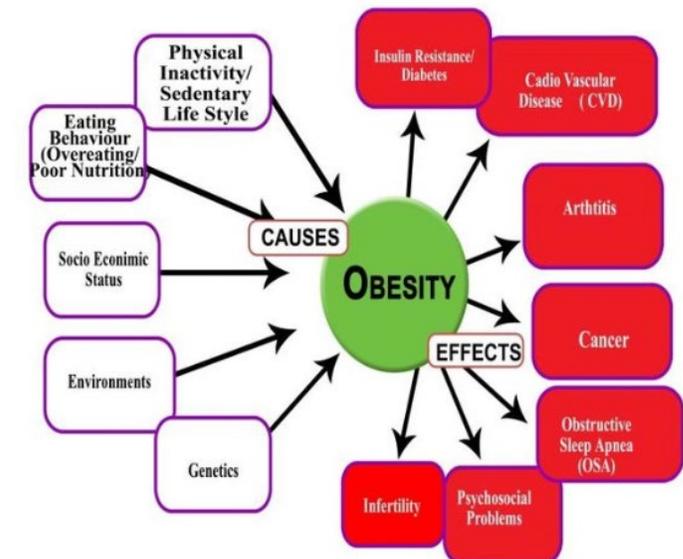

Obesity is defined as abnormal or excessive fat accumulation.

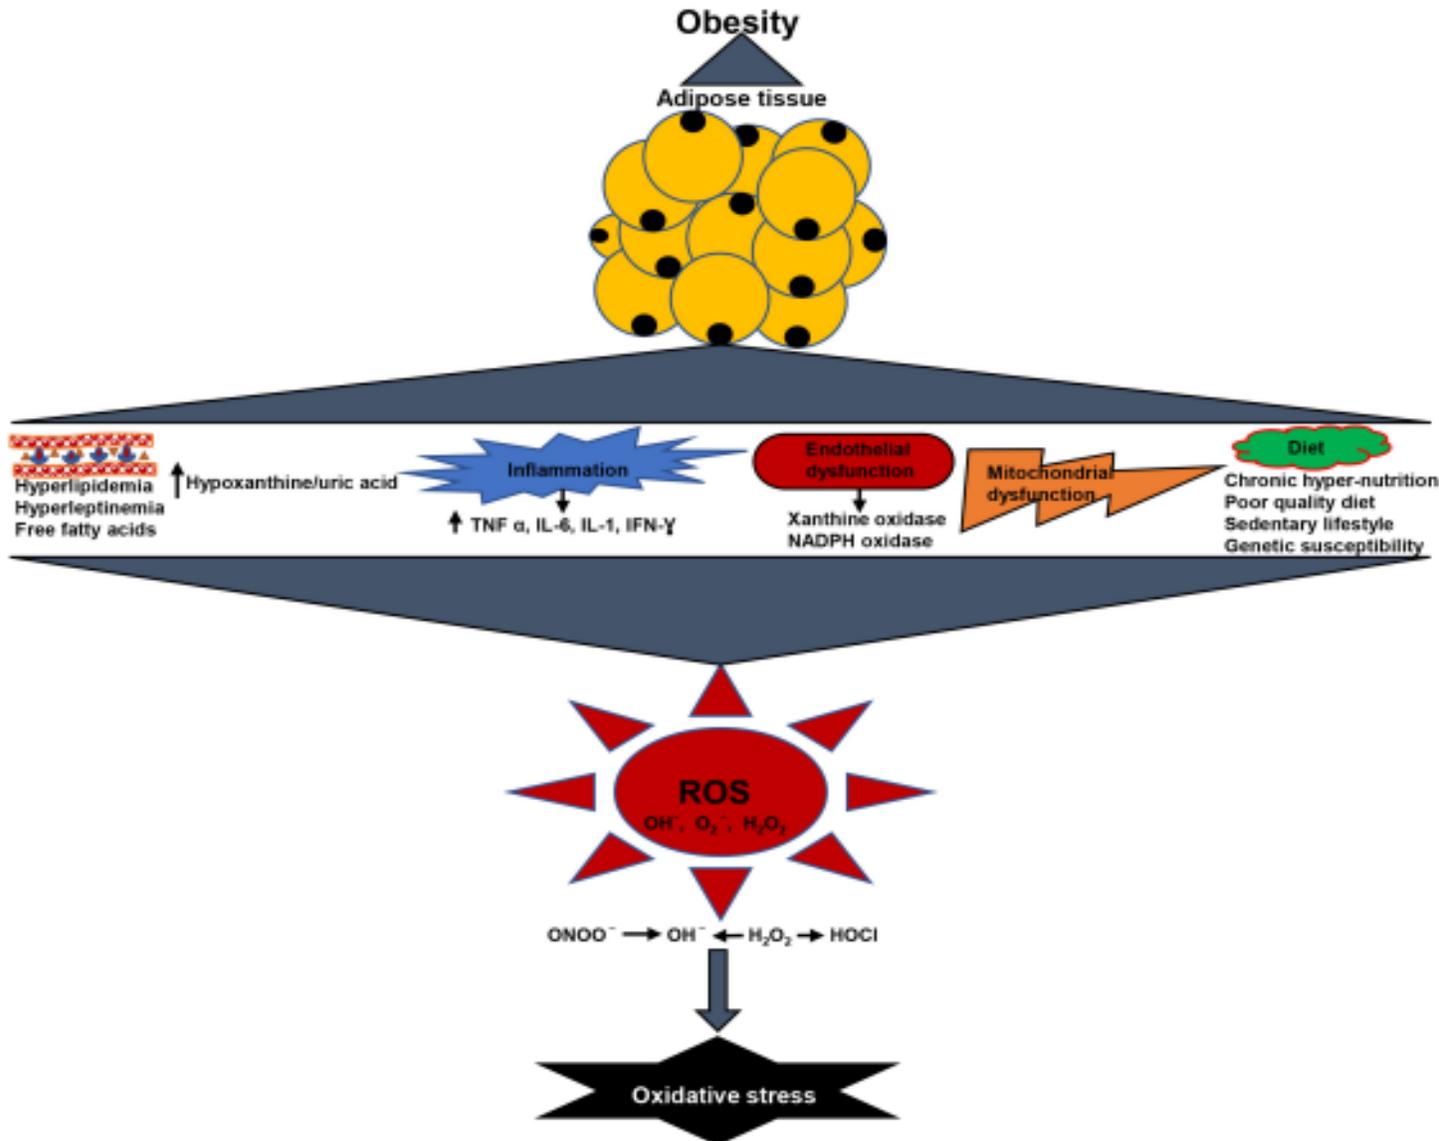

Source: TFAH analysis of BRFSS data

As of 2021, according to National Health and Nutrition Examination Survey in US shown that 41.9 percent of adults have obesity.

# Pathway of oxidative stress generation in obesity

Free fatty acids (FFA) elevate the production of superoxide

Obesity induces the production of common inflammatory cytokine mediators

Increased muscle activity in obese individuals can result in an excess of free radicals

# Aim & Hypothesis

## AIM

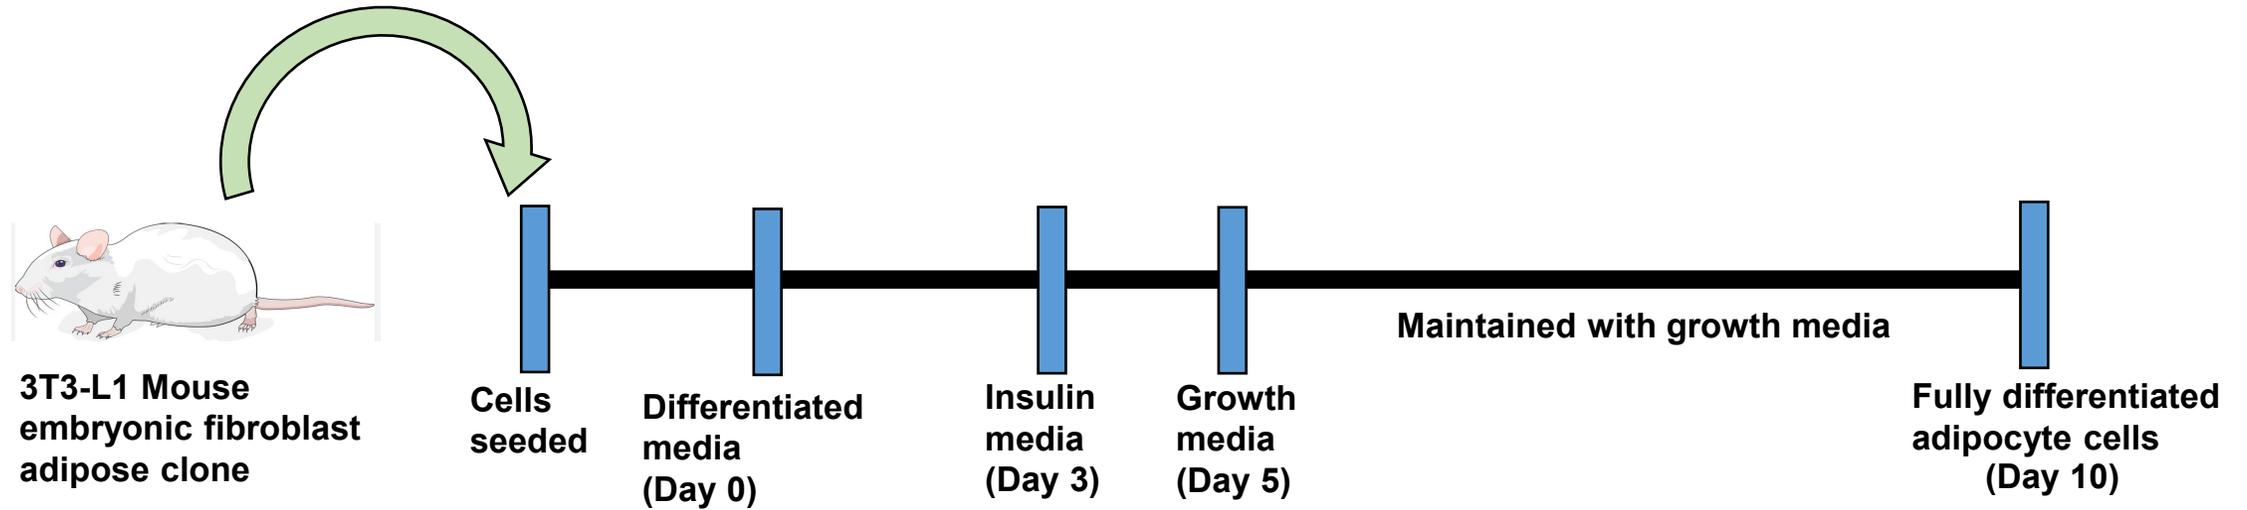

**To identify increase Oxidative Stress (OS) in 3T3-L1 differentiated adipocytes via the hydrogen peroxide treatment**

## HYPOTHESIS

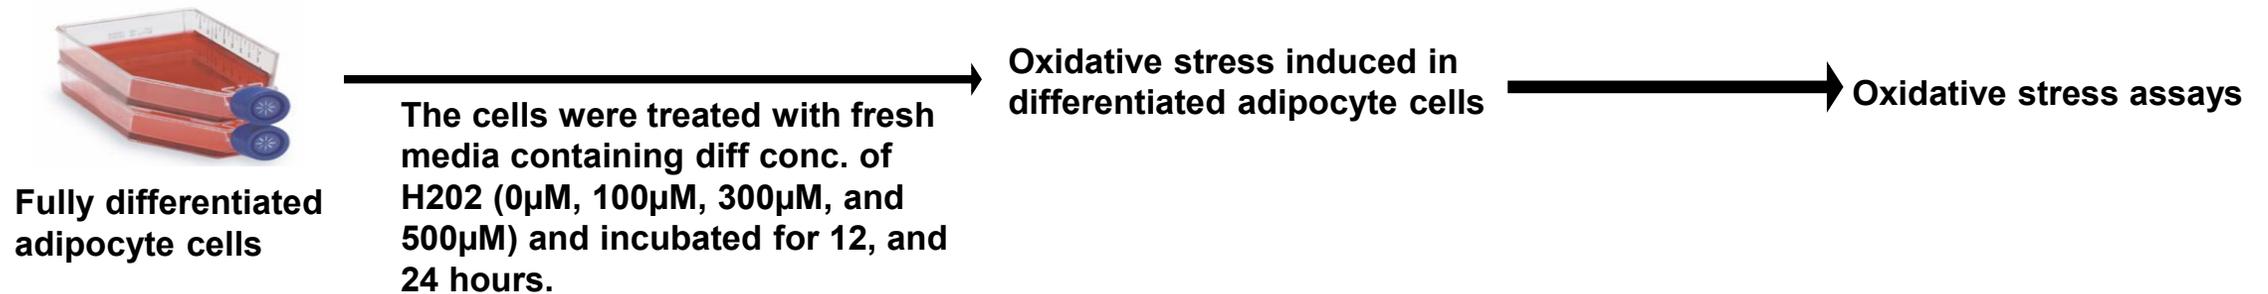

**The production of Reactive Oxygen Species (ROS) can induce increase in Oxidative Stress (OS), which may give insight into the metabolic condition of an obesity-related disease in an obese individual**

# Methodology

## Differentiation of 3T3-L1 MBX clone to adipocyte cells

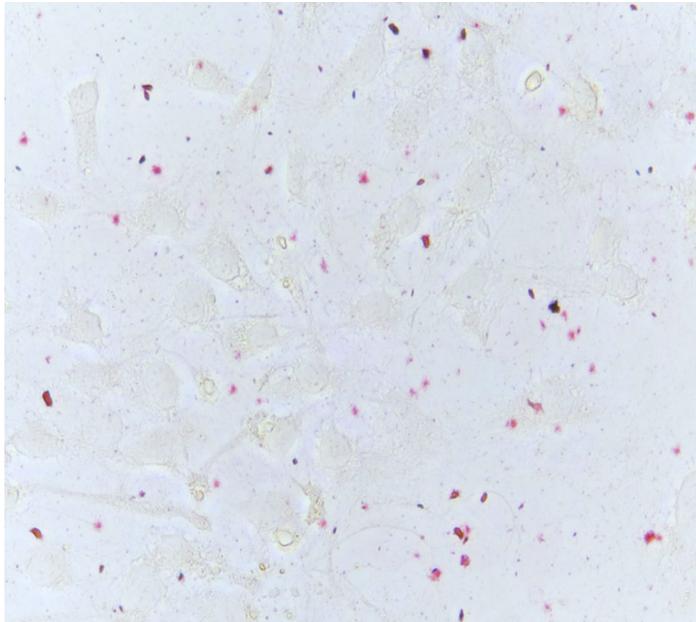

## Oxidative stress was induced in differentiated adipocytes

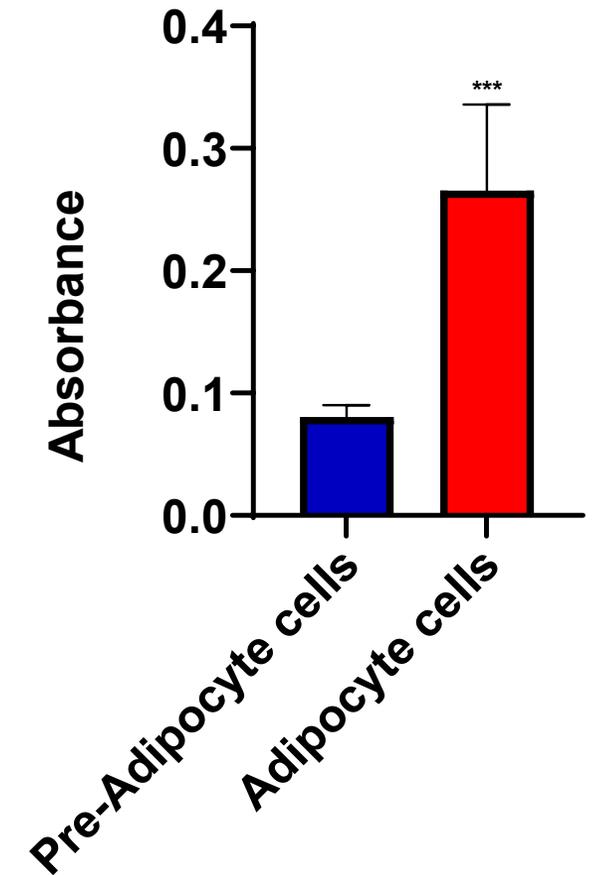

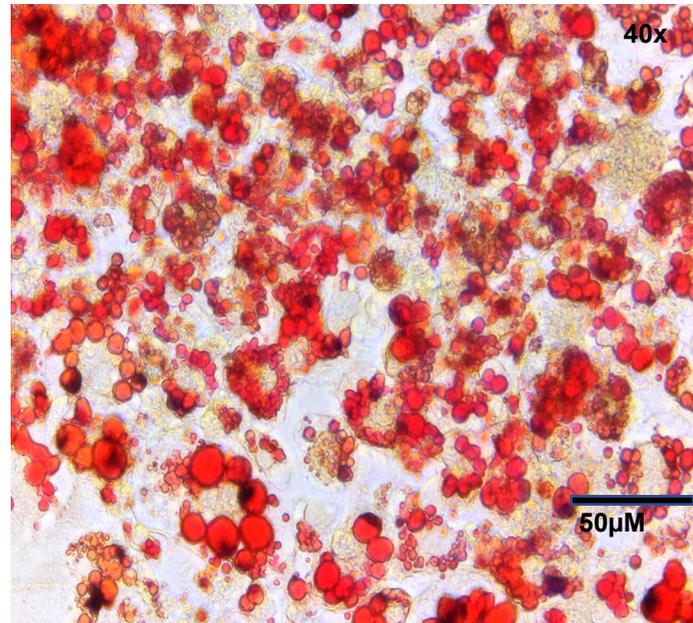

# Obesity Adipocyte cells Model

Pre-Adipocyte cells

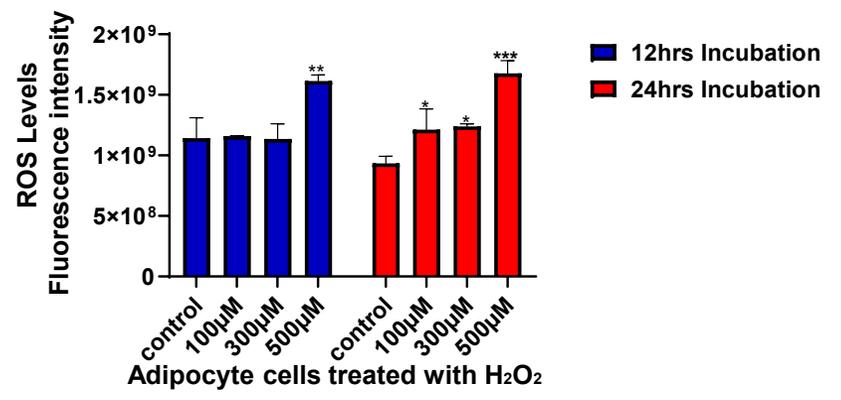

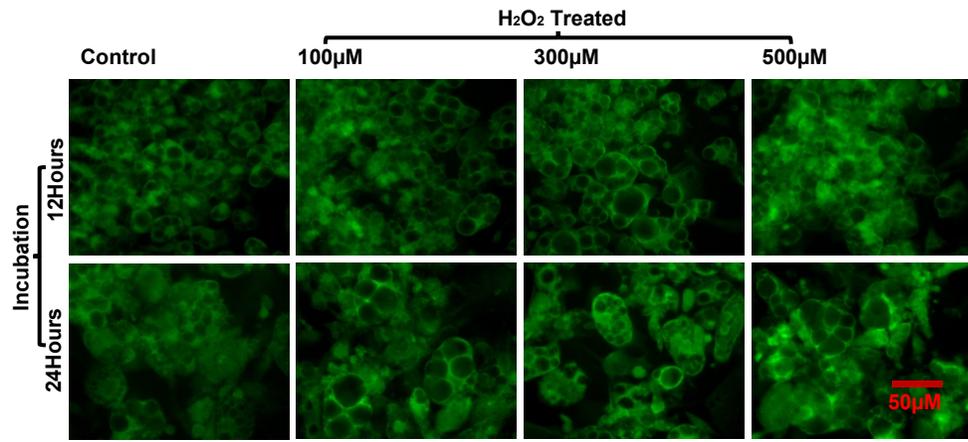

Differentiated Adipocyte cells

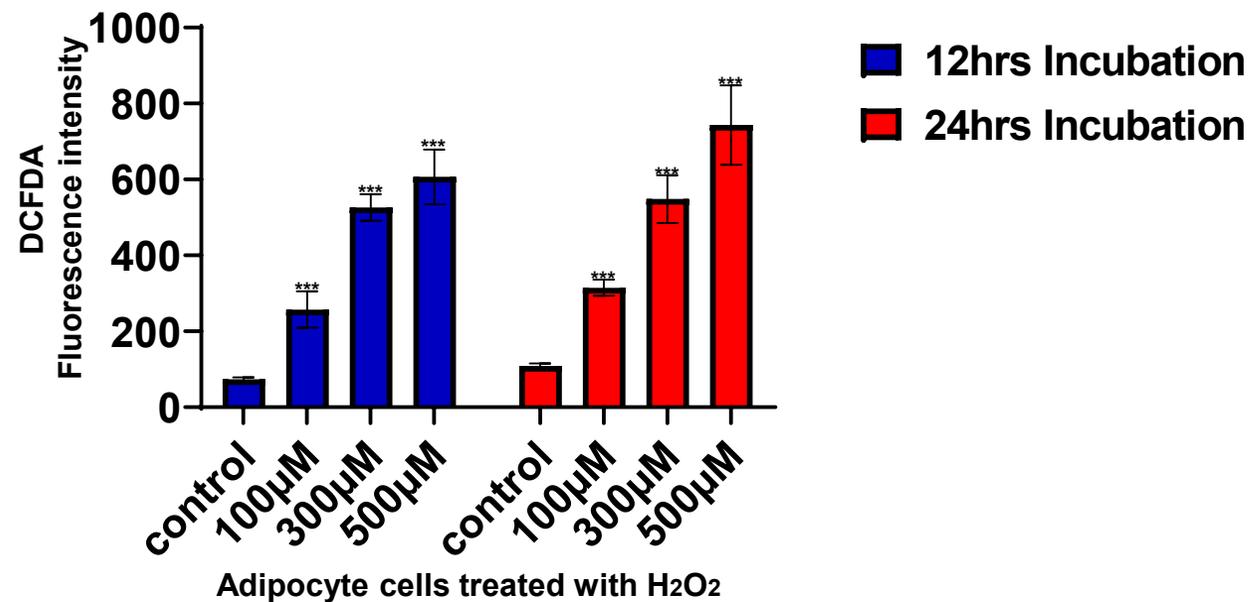

Significant level: \*\*\*  $p < 0.001$

# Obesity model - 3T3-L1 adipocytes ROS generation

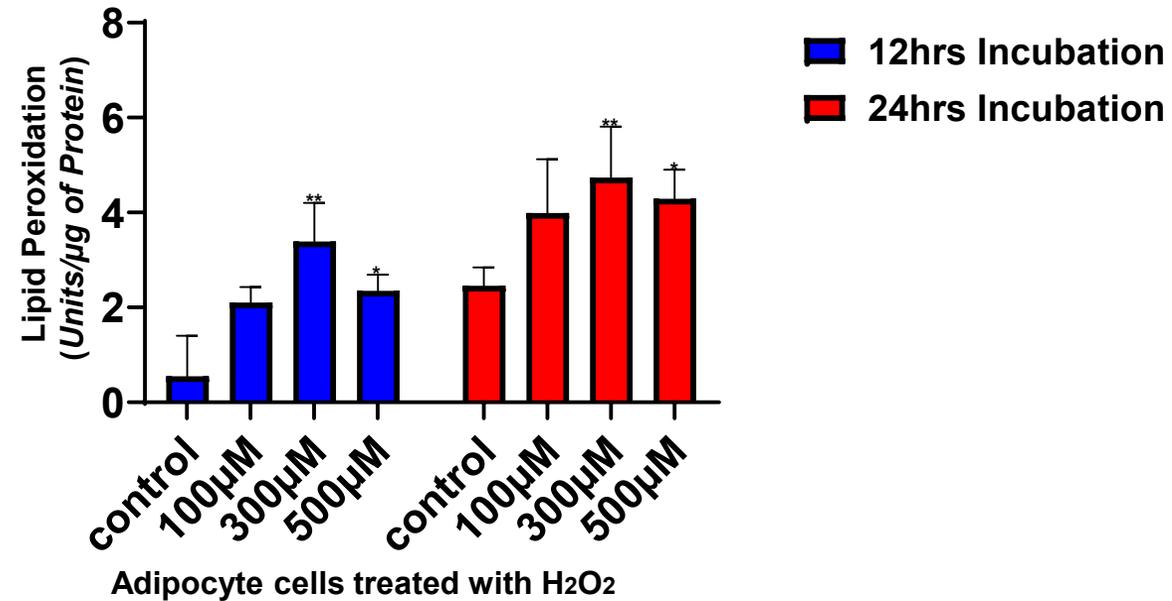

Significant level: \* p<0.05; \*\* p<0.01; \*\*\* p<0.001

# Obesity model - 3T3-L1 adipocytes ROS generation

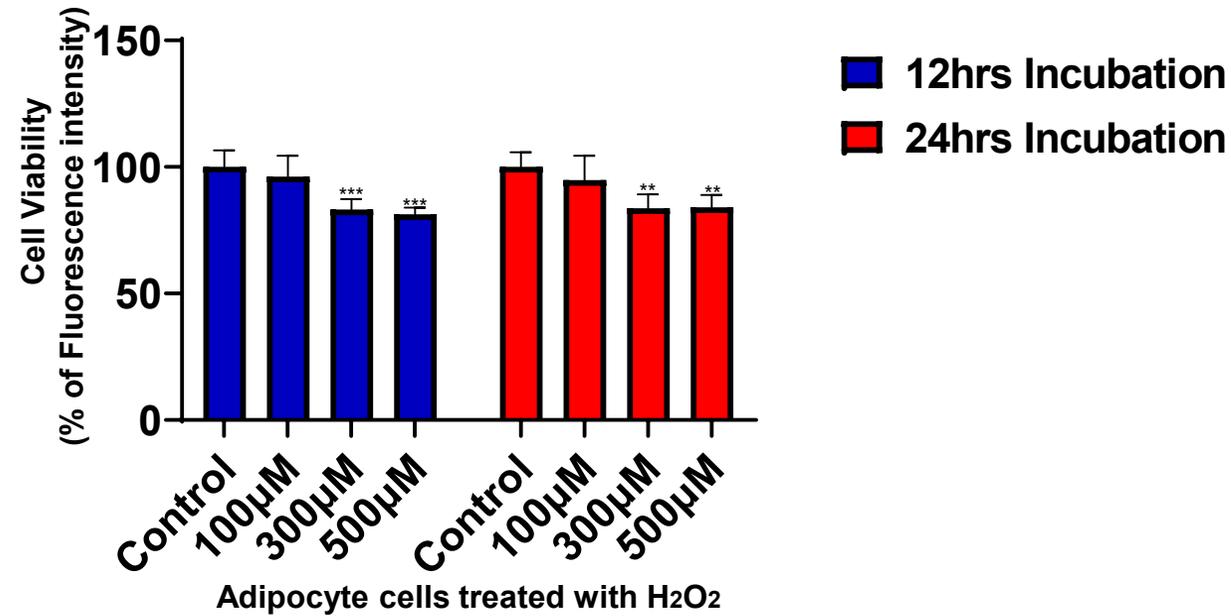

Significant level: \*\*\* p<0.001

# Obesity model - 3T3-L1 adipocytes Lipid Peroxidation

Significant level: \* p<0.05; \*\* p<0.01

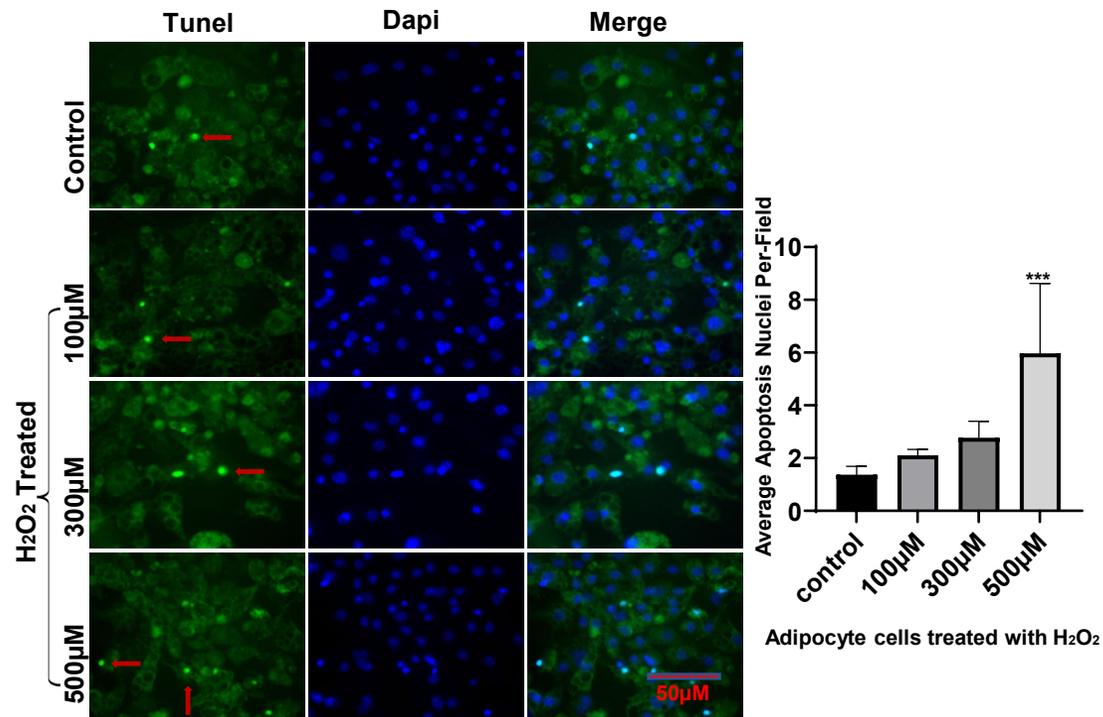

# Obesity model - 3T3-L1 adipocytes Cell viability

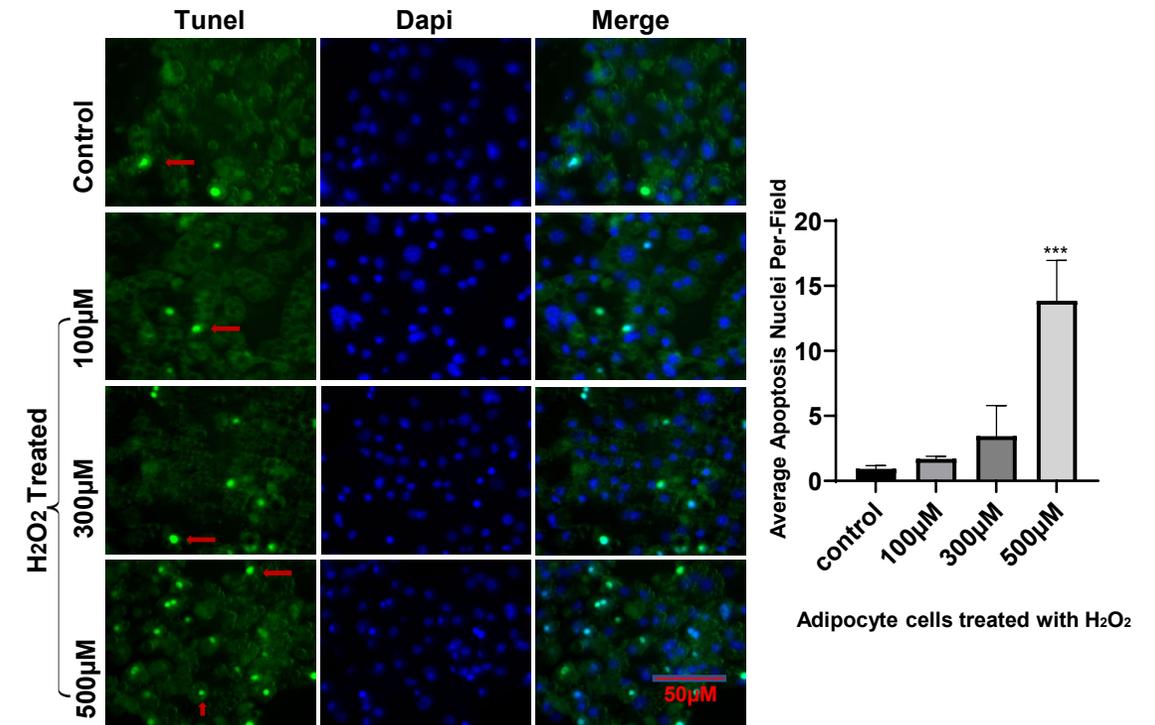

Significant level: \*\* p<0.01; \*\*\* p<0.001

# Obesity model – H<sub>2</sub>O<sub>2</sub> induced apoptosis in 3T3-L1 adipocytes

12 hours incubation

24 hours incubation

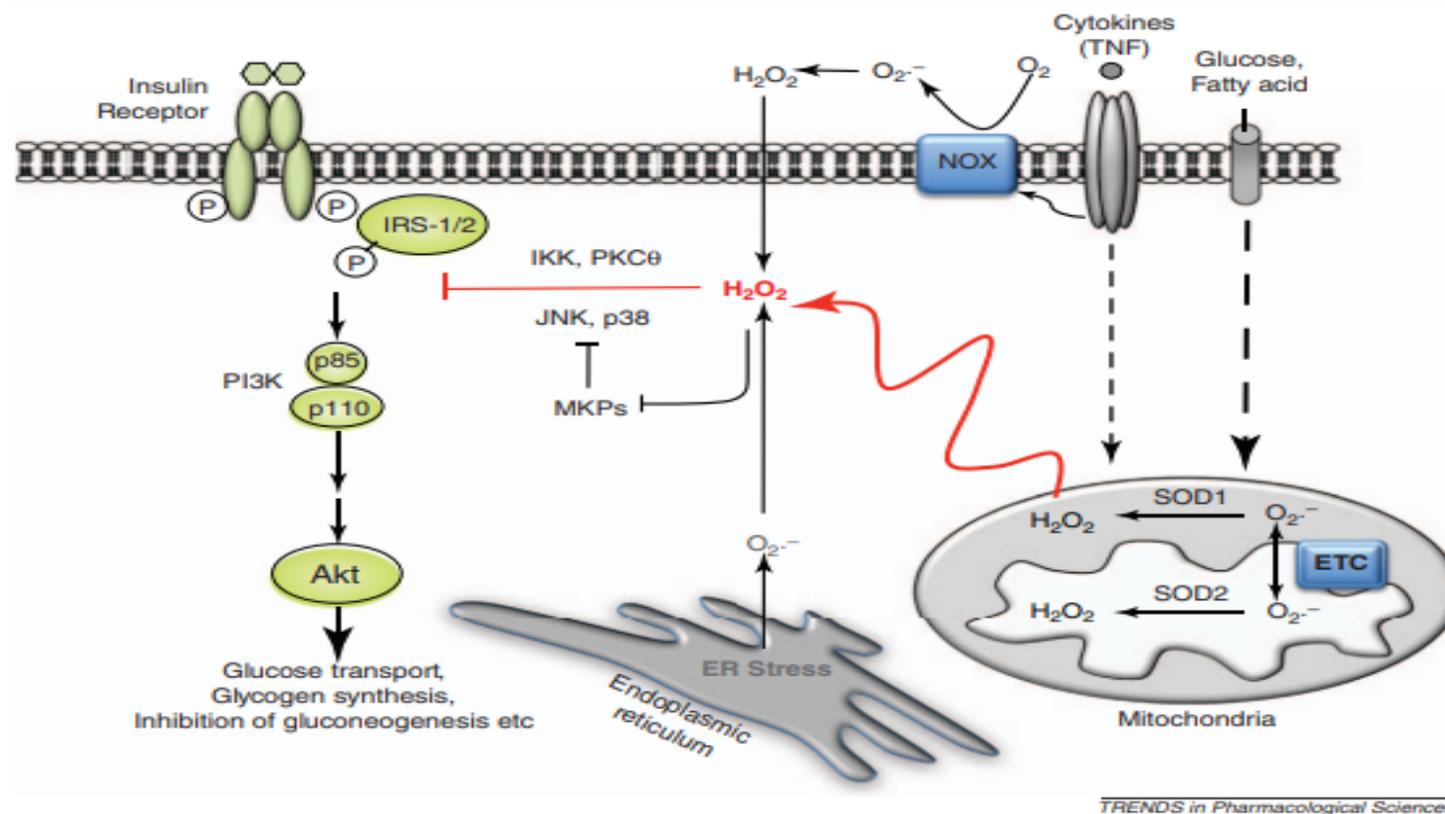

Significant level: \*\*\* p<0.001

# Conclusion

In differentiated adipocytes cells; 300  $\mu\text{M}$ , and 500  $\mu\text{M}$  of  $\text{H}_2\text{O}_2$  can produce substantial OS without altering the cell morphology

Oxidative Stress influences metabolic enzyme activity, transcription factor, and gene expression that can lead to type 2 diabetes and other obesity-related diseases

**To identify the cellular Volatile Organic Compounds, release due to the increase in Oxidative Stress in differentiated 3T3-L1 adipocytes obese model which can serve as biomarker for obesity-related diseases**
