## Auburn will take student leadership to new heights

### Kevin Moore

Associate Professor and Chair, Interior Architecture, Architecture, Planning and Landscape Architecture, College of Architecture, Design and Construction

The greatest influence on me has been a series of exceptional teachers. These mentors provided a shortcut to understanding how architecture makes ideas appear in the world. Because I try every day to pass on to my students the profound influence of my own teachers, I am greatly honored and humbled to receive this award.

## Auburn will expand its role as a partnership university by advancing impactful and transformative research and scholarship

### Mona El-Sheikh

Leonard Peterson & Co. Inc. Professor, Human Development and Family Studies

I am grateful to all of my collaborators, the faculty, administrators, students, and support personnel at Auburn for the innumerable ways they have contributed to my research projects over the years. I am always gratified that when I receive reviews of grant proposals, the "Research Environment" category is one I am always confident will be rated highly.

## Auburn will elevate its active engagement with the State of Alabama

### Henry W. Kinnucan

Alumni Professor, Agricultural Economics and Rural Sociology, College of Agriculture

The primary focus of my research is the effects of public policies on agricultural prices, production, trade, the environment, and economic welfare. The public policies examined include generic advertising, antidumping duties, state and federal subsidies for K-12 education, and subsidies for grassland protection. My recent research examines the effect of aquaculture on fish prices worldwide.

## Auburn graduates will expand their distinguished reputation in the marketplace

### Scott McElroy

Professor, Crop Soil and Environmental Science

One thing I love about being a professor at Auburn is the fact I am leaving a legacy. Students in my department have taken my Principles of Weed Science class for 10 years, and it is thoroughly enjoyable to me to hear past students commiserate with current students or students from different years regarding the enjoyment (difficulty) of the class. To know I am creating this shared experience (misery) that students have throughout my career at Auburn is very rewarding. I feel by being an effective teacher, I am helping create greater connection to the university, thus deepening their connection as alumni.

## Auburn will continue to broaden its commitment to diversity and inclusion

### Robert S. Boyd

Professor and Undergraduate Program Officer, Biological Sciences, College of Sciences and Mathematics

I like Auburn's family-oriented philosophy. The university works hard to create a caring and responsible relationship within and between its faculty and students. Its setting, as a big university in a relatively small town, is conducive to a high-quality lifestyle and also provides a diversity of experiences and cultures.
